

**MANAGING AN URBAN FOREST OF
OPINIONS –
*NEW GOVERNANCE (MODELS)
FOR GREEN INFRASTRUCTURE***

CECIL KONIJNENDIJK, PROFESSOR OF URBAN FORESTRY

- Changing urban forest governance
- Components of 'good governance'
- Analysing two cases: Melbourne and Vancouver
- Making things even more complicated...

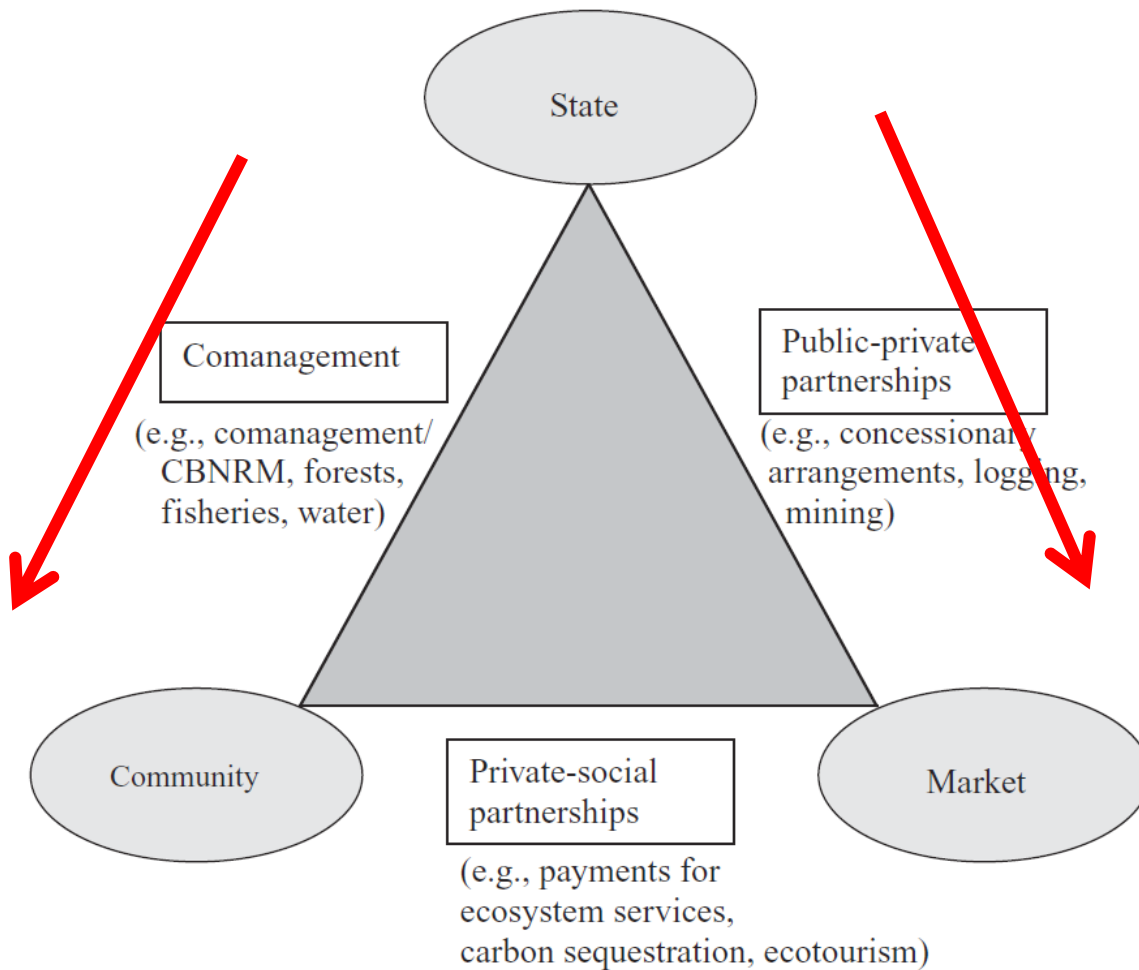

DEFINING 'GOVERNANCE'

- Efforts to direct human action towards **common goals**, and more formally as the **setting, application and enforcement of generally agreed to rules**
- Role of non-public actors as becoming more influential over policy
- *Governance by / with / without government*
- Governance *with* government: boundaries between and within public and private sectors have become blurred

Who decides, who is involved –
and who benefits (or loses)?

How is decision-making done?

Figure 6.2 Views by city officials (N=20) on future involvement of stakeholders as gauged by of the following question in the questionnaire 'Who should be involved to what intensity in the future?'

SCOTT ADAMS

Buizer et al. (2015)

COMPONENTS OF 'GOOD GOVERNANCE' IN URBAN FORESTRY

Discourses:

- Recognition of multiple storylines, agreement on important ones

Actors:

- Inclusiveness, alliances, the role of 'champions'

Rules of the game:

- Clear and generally agreed to; innovation

Resources:

- Funding, knowledge (including local, traditional), power

AMERICAN FORESTS

140 YEARS of Protecting and Restoring Forests

Typology of governance arrangements

Municipalities mobilising social capital

Strategic planning instruments to invite grassroots and individual citizens to participate in place making or place-keeping

Green hubs

Experimental, creative coalitions connecting various networks and knowledges to develop community based solutions.

Grassroots initiatives

Relatively small scale initiatives located on public land, started and maintained quite autonomously by local residents.

Co-governance

Partnerships between municipality and citizens or grassroots with power being shared across actors.

Organization initiated grassroots

Social enterprises or NGO's mobilising community action, in focus and power located between co-governance and grassroots initiatives.

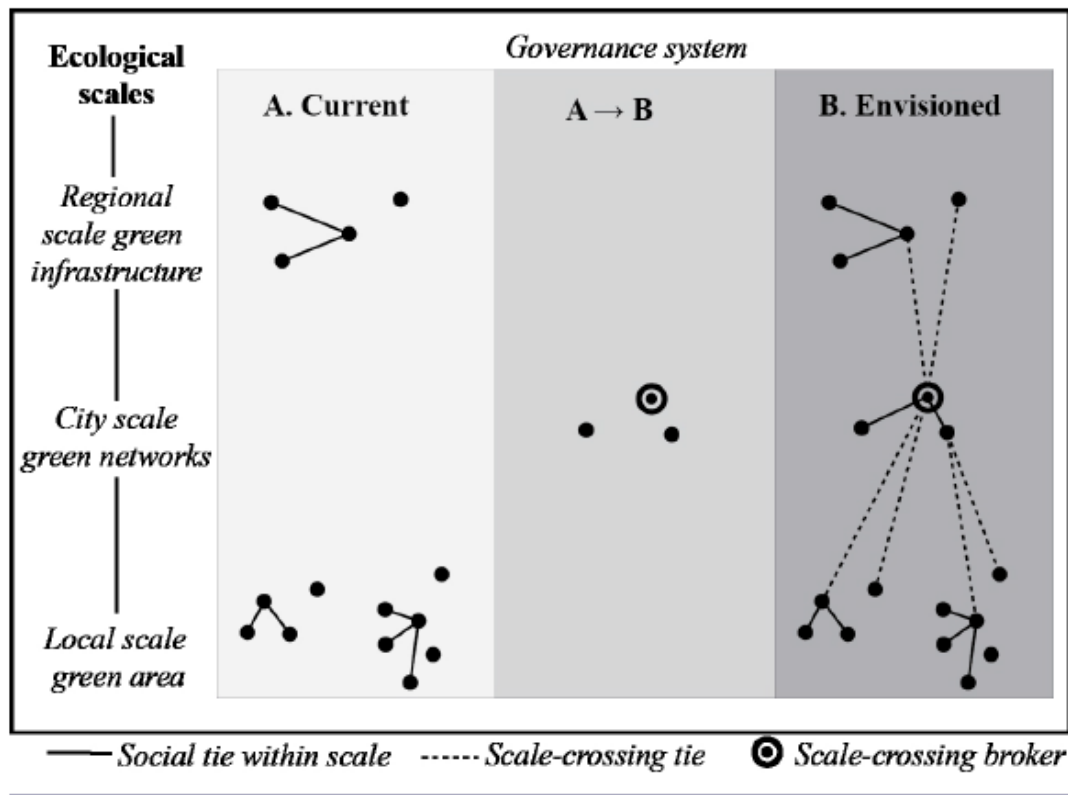

Green barter

Maintenance or development obligation for businesses in exchange for a formalised right to use the values of space for business profits.

Table 15.1 Ideal-typical governance arrangements according to Arnouts et al. (2012).

| | <i>Hierarchical</i> | <i>Closed co-governance</i> | <i>Open co-governance</i> | <i>Self governance</i> |
|---------------|----------------------------|------------------------------|-----------------------------|--------------------------------|
| <i>Actors</i> | Mainly governmental actors | Select mixed group of actors | Large mixed group of actors | Mainly non-governmental actors |
| <i>Power</i> | With government | Pooled | Diffused | With non-government |
| <i>Rules</i> | Governmental coercion | Restricted cooperation | Flexible collaboration | Non-governmental forerunning |

VALUING LONDON'S URBAN FOREST

Results of the London iTree Eco Project

Summary

The London iTree Project involved hundreds of volunteers conducting the largest city tree survey of its kind in the world in 2014. Using the information collected, the quantity and value of some of the benefits that London's trees and woodland provide were calculated, referred to as ecosystem services.

The benefits measured include air pollution removal, reduction of storm water run-off and carbon sequestration.

This leaflet provides just some of the headline information and key messages. For further information – including a breakdown of the trees and associated benefits for both inner and outer London – download the full report "Valuing London's Urban Forest" from www.urbanforestcover.org/location/london

London's trees provide at least £133M of benefits every year in terms of air pollution removal, carbon sequestration and reducing the amount of water going into drains.

There are 8.4M trees in London

Trees prevent 10x the volume of water in the Serpentine bank from entering London's drainage system. This helps reduce the risk of localised flooding.

Urban Forest Strategy for Melbourne, Australia

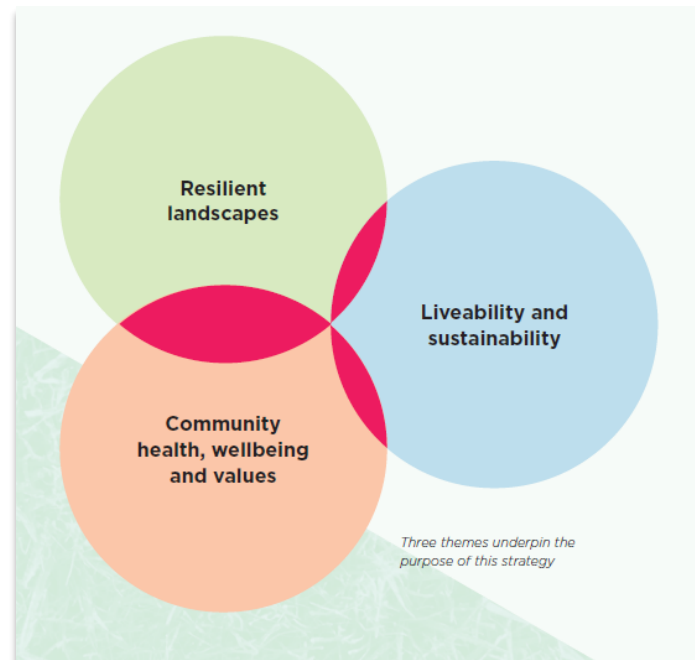

VISION

The City of Melbourne's urban forest will be resilient, healthy and diverse and will contribute to the health and wellbeing of our community and to the creation of a liveable city.

Key challenges

The City of Melbourne is currently facing three significant challenges: **climate change, population growth and urban heating**. These will place significant pressure on the built fabric, services and people of the city. A healthy urban forest will play a critical role in maintaining the health and liveability of Melbourne.

MELBOURNE'S URBAN FOREST

60,000

COUNCIL TREES

\$650m

AMENITY VALUE

22%

CANOPY COVER

LOW DIVERSITY
Just three species – plane, elm and red river gum make up more than 35% of Melbourne's trees

+

AGEING
Some of our grandest trees are nearing the end of their lives

=

HIGH VULNERABILITY

Fitzroy Gardens now

CITY OF MELBOURNE EXPECTS TO LOSE

If no action is taken

- 27% of trees in 10 years
- 44% of trees in 20 years

CHALLENGES

Pests & Disease
Myrtle rust could affect almost 45% of Melbourne's trees

Climate change
Victoria's temperatures are predicted to increase into the future
Victoria has recorded five of its ten hottest years since 1999**

**Ranked according to average daily temperature

Increasing Population & Density

THE FUTURE

OUR VISION
The City of Melbourne's urban forest will be resilient, healthy and diverse and will contribute to the health and wellbeing of our community and to the creation of a liveable city.

URBAN FOREST STRATEGY TARGETS

1. Increase canopy cover – 40 per cent by 2040.
2. Increase diversity – no more than 5% of one tree species, 10% one genus, 20% one family.
3. Improve vegetation health – 90 per cent of tree population healthy by 2040.
 4. Improve soil moisture.
 5. Improve biodiversity.
6. Inform and consult with the community.

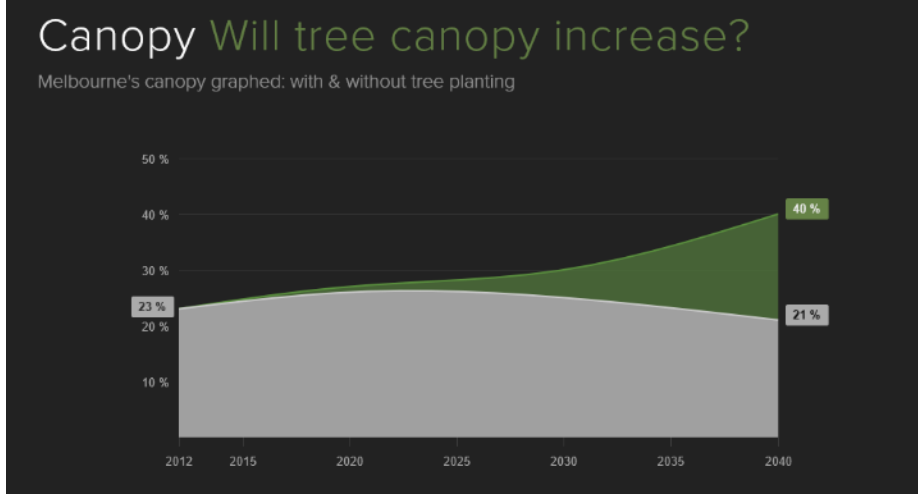

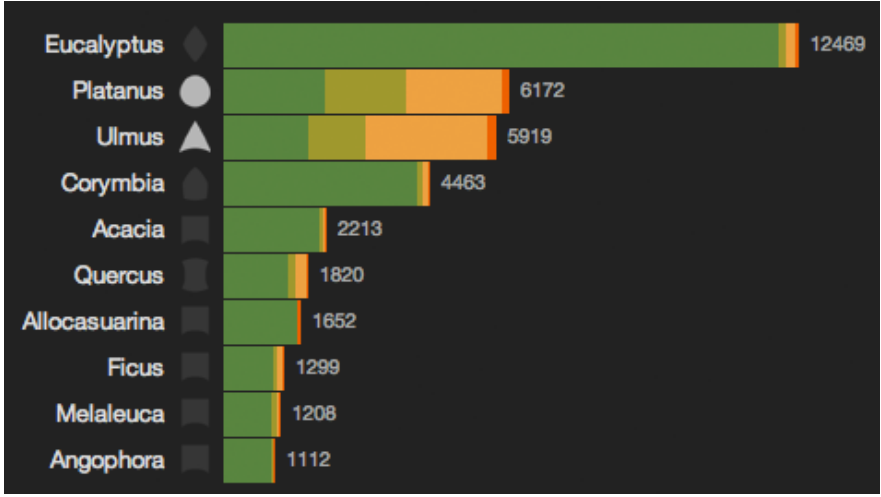

URBAN FOREST STRATEGY
MAKING A GREAT CITY GREENER
2012-2032

MELBOURNE CONVERSATIONS

Getting Melbourne talking

ANALYSING THE MELBOURNE CASE

- Strong and supporting discourses: resiliency, quality of life, health
- Champions at different levels
- Strong urban forestry team with clear mandate
- Community engagement
- Use and communication of knowledge

WHAT WE'VE ACCOMPLISHED

four
new urban farms

Launched city-wide food scraps collection for

Science World now powered by the SEFC Neighborhood Energy utility, producing

70%
LESS GREENHOUSE GASES

450
new community garden plots
(in 2011 - a record!)

100,000
VANCOUVER HOMES

3
new farmers markets

Required water meters for all single-family homes.

16%
INCREASE IN WATER USE LEVELS

Vancouver now has a **PERFORMANCE SAFETY ACTION PLAN**

46%
INCREASE IN LEED BUILDINGS

Launched the **\$2 Million**

Greenest City Food in partnership with the Vancouver Foundation

93%
OF VANCOUVER RESIDENTS LIVE WITHIN A 5-MINUTE WALK OF A GREEN SPACE.
We're working to make it 100%.

MORE WORK TO DO

150,000
new trees by 2020

food scraps recycling

for condos, apartments and businesses

Launch a bike share program in Spring 2013

rapid transit for the Broadway Corridor

City of Vancouver Urban Forest Strategy

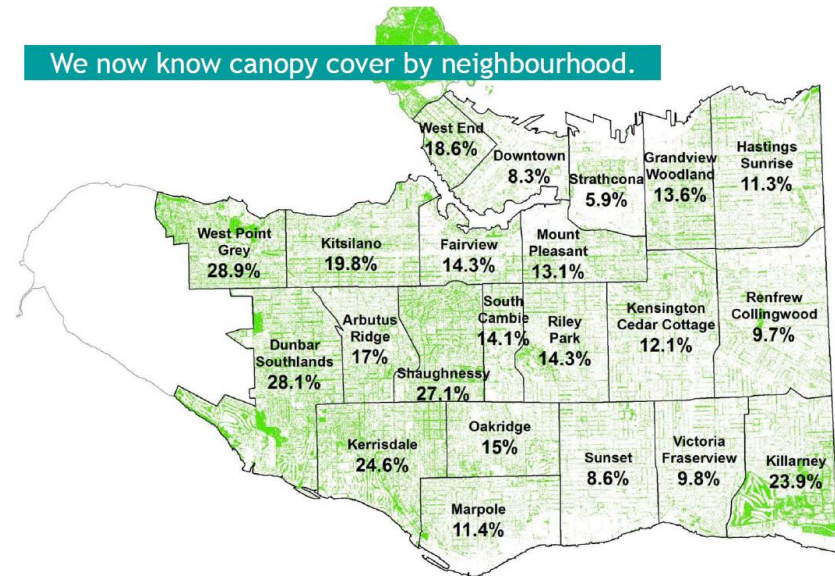

APRIL 15, 2014

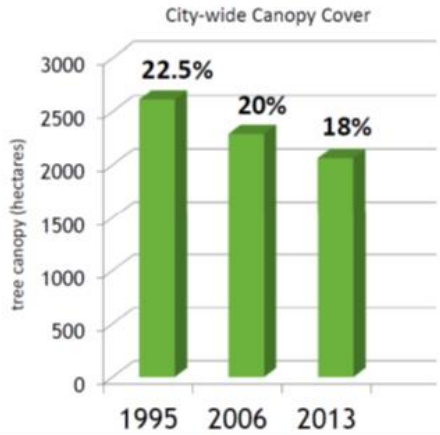

make up what is known as Vancouver's "urban forest"

We now know canopy cover by neighbourhood.

However, our canopy cover has been declining over the past two decades. Why is this of concern?

News / Vancouver

Vancouver ranks highest in tree canopy coverage among world's major cities

But densification could threaten the city's urban forest, says one urban forestry expert

METRO FILE

A view of Vancouver's Stanley Park.

By: [Wanyee Li](#) Metro Published on Wed Jan 04 2017

A new analysis of trees in major cities around the world puts Vancouver at the top of list for the largest green canopy.

Researchers at Massachusetts Institute of Technology used Google Street View to calculate tree canopy from a human point of view, as opposed to the more common way, from a bird's-eye view.

According to the interactive platform, called [Treepedia](#), Vancouver scored 26 per cent – far ahead of Geneva's 21 per cent and neighbouring Seattle's 20 per cent.

News - GTA

North York resident wins right to move city-owned tree based on religious belief

Vastu, an ancient Indian system of architecture involving home design, holds that trees shouldn't be planted directly in front of a home's main entrance.

North York resident Sanjeev Joshi says the 17.5-centimetre diameter maple tree in front of his house violates the principles of vastu. (SAMMY HUKES/TORONTO STAR / SAMMY HUKES/TORONTO STAR)

ACTION ITEM 1

Amend Section 4 of the Protection of Trees By-law

CURRENT SECTION 4.5: property owners are able to remove one tree per year regardless of tree health, size or species.

PROPOSED AMENDMENT: trees can be removed only if they meet the criteria in Section 4.4 of the existing By-law:

- Hazardous
- Dead, diseased or dying
- Within a building envelope
- Close to or interfering with drainage systems, sewer systems or utility wires
- Causing damage to property including roofs and sidewalks.

ANALYSING THE VANCOUVER CASE

- Competing discourses: greening and canopy expansion versus development
- Champions under debate
- Unclear institutional set-up, with e.g., multiple municipal actors
- Rules of the game and legislation
- Lack of information: the privately-owned urban forest
